

JAVA

1.Store the following values in variables with respective data types and print

- 100
- 70.25
- 'M'
- "Great"

Output: M Great 100 70.25

```
public class DataType {  
    public static void main(String[] args) {  
        // Storing values in variables  
        int num = 100;           // Integer  
        double decimal = 70.25; // Floating-point number  
        char letter = 'M';       // Character  
        String word = "Great";   // String  
  
        // Printing output in the required format  
        System.out.println(letter + " " + word + " " + num + " " + decimal);  
    }  
}
```

Output: M Great 100 70.25
