

- 1) write a program to print only numbers divisible by 10 from 1 to 100 in reverse order.

Package operator

```
public class divisible {
```

```
    public static void main (String[] args) {
```

```
        for (int i = 100; i >= 10; i--) {
```

```
            System.out.println(i);
```

```
        }
```

```
    }
```

```
}
```

Output

100

90

80

70

60

50

40

30

20

10

2) write a program to store the values of student marks in an array variable and print all the values using basic for loop

package operators;

import java.util.Scanner;

public class marks {

public static void main (String [] args) {

Scanner sc = new Scanner (System.in);

int [] marks = new int [3];

System.out.print ("Enter maths mark: ");
marks [0] = sc.nextLine ();

System.out.print ("Enter Tamil mark: ");
marks [1] = sc.nextLine ();

System.out.print ("Enter English mark: ");
marks [2] = sc.nextLine ();

for (int i = 0; i < marks.length; i++) {
 System.out.println (marks[i]);
}

output:

Enter maths mark: 80

marks: 80

Enter Tamil mark: 90

90

Enter English mark: 90

90
