

JAVA

1.Create a class Employee and it should include attributes (properties) like empId, empname, emp dep and empsalSet the relevant data type for all that mentioned variables. It should have methods like doTask, assignTask.From main method , create objects for the class Employee, The assignTask should accept parameter like emp role andbased on the role it should return the task. doTask method is without parameter and it simply returns a value.

class EmployeeMethods: assignTask with single parameter (empRole), doTask

package operators;

public class Employee {

// Attributes

int empId;

String empName;

String empDep;

double empSal;

// Method with parameter

String assignTask(String empRole) {

if (empRole.equalsIgnoreCase("Manager")) {

return "Manage Team";

} else if (empRole.equalsIgnoreCase("Developer")) {

return "Develop Application";

} else if (empRole.equalsIgnoreCase("Tester")) {

```
        return "Test Application";
    } else {
        return "General Office Work";
    }
}
```

```
// Method without parameter
```

```
String doTask() {
    return "Task Completed";
}
```

```
public static void main(String[] args) {
```

```
    // TODO Auto-generated method stub
```

```
// Creating Employee object
```

```
Employee emp = new Employee();
```

```
// Assigning values
```

```
emp.empId = 101;
```

```
emp.empName = "Maivizhi R";
```

```
emp.empDep = "IT";
```

```
emp.empSal = 50000;
```

```
// Display Employee Details
```

```
System.out.println("Employee ID: " + emp.empId);  
System.out.println("Employee Name: " + emp.empName);  
System.out.println("Department: " + emp.empDep);  
System.out.println("Salary: " + emp.empSal);  
  
// Calling methods  
System.out.println("Assigned Task: " + emp.assignTask("Tester"));  
System.out.println("Do Task: " + emp.doTask());  
  
}  
  
}
```

OUTPUT :

Employee ID: 101

Employee Name: Maivizhi R

Department: IT

Salary: 50000.0

Assigned Task: Test Application

Do Task: Task Completed
